dline^xsign ltd.

has manufactured its products in the UK since its creation in 1999.

Once part of the Danish ironmongery company **dline**, we were the first manufacturer in the world to launch a secret-fixed stainless steel modular sign system in 2000, based on the **Jigsaw**™ fixing system designed by British architect Mark Shaw-Smith.

innovation

So many unique materials and texting methods flow from a deeply technical approach to sign design and manufacturing, including indelible lasered text from powdered glass or new materials such as polished concrete and bronze foil.

Unique processes include Multi-Metal printing which changes the surface properties of metal to create a unique and permanent graphic expression.

Central Bank of Kuwait

architect: HOK

signs supplied 2015

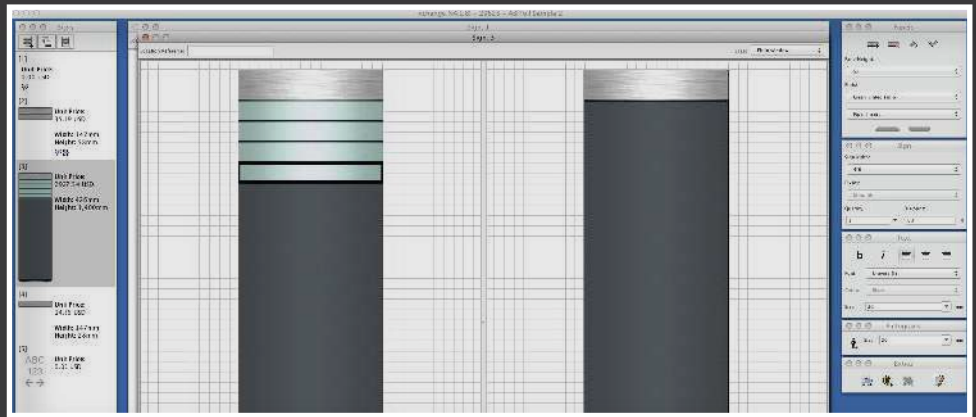

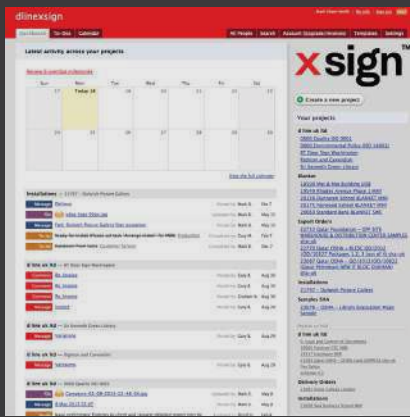

global partner

As a preferred partner on some of the world's highest profile buildings, we have proven expertise in wayfinding, sign design, manufacturing and project management.

The company has experience of exporting signs to more than forty countries and has a supportive international outlook.

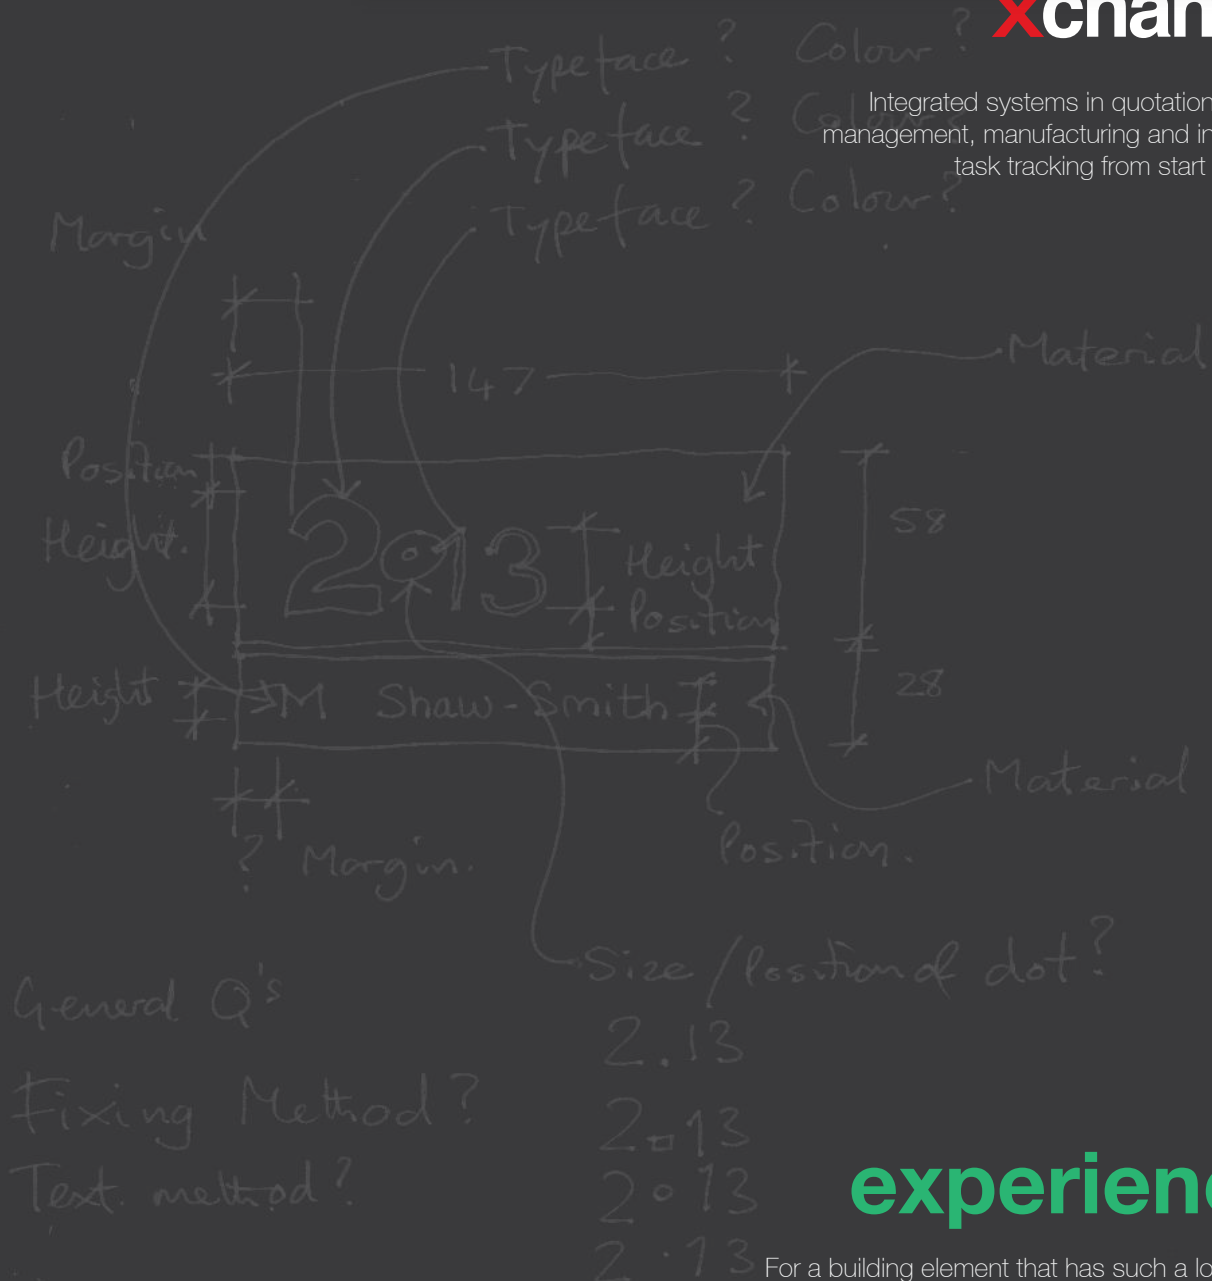

Numerous clients have selected **xsign™** products for use across their international office locations enjoying local support and centralised brand consistent manufacturing.

xchange

Integrated systems in quotation, project management, manufacturing and individual task tracking from start to finish.

experience

For a building element that has such a low value, signage is one of the most difficult construction packages to manage with numerous decision makers.

All processes must be extremely robust therefore to ensure that error creep is removed and deliverables are PERFECT first time.

Our experience in handling large complex signage projects has allowed us to develop effective and sophisticated project management tools.

corporate

A key partner for large blue chip companies since 1999.

Canary Wharf London

projects include signs for:

Clifford Chance HQ - Gensler

Reuters HQ - Kohn Pedersen Fox/Perkins & Will

McGraw Hill HQ - HLW

Barclays Bank HQ - Conran & Partners

One Canada Square - Various

Moodys - Swanke Hayden Connell

MetLife - Perkins & Will

ConocoPhillips - Lees Associates

products

We constantly review and invest in new technologies and offer high value and high quality products for all aspects of sign needs.

exterior

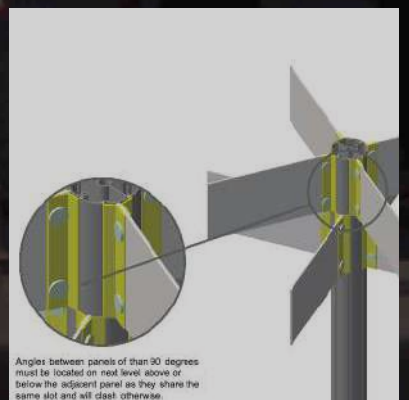

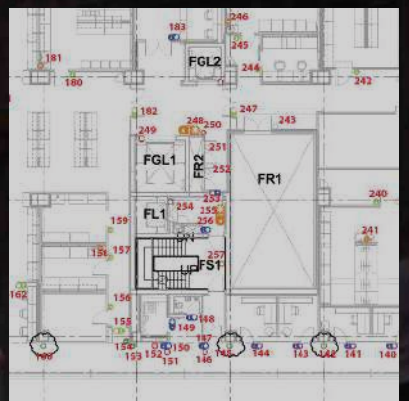

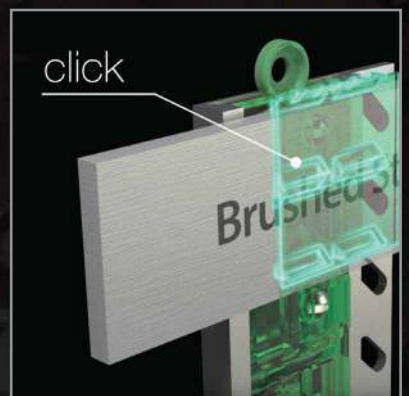

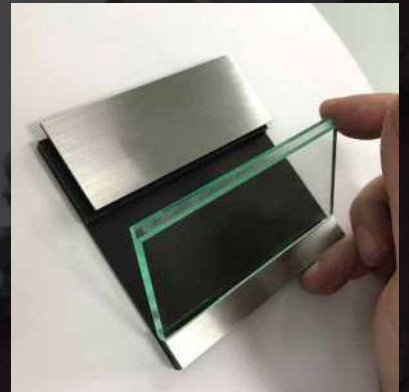

graphics

culture

Our company is owned and headed by British architect Mark Shaw-Smith and all **dline™** and **xsign™** products are architect designed.

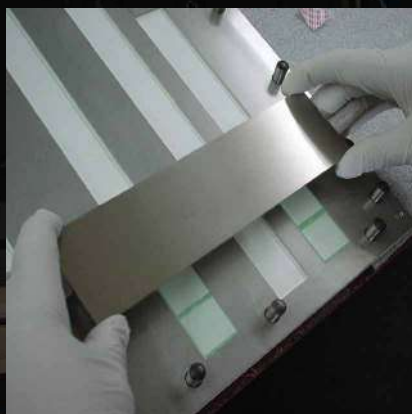

Integral to the design process we consider the needs of installers, contractors and facilities teams to keep the signs fresh and easy to handle.

Marsh HQ - London

quality

A critical approach to continual improvement has lead to ISO 9001 and 14001 certification.

We creatively examine ways of working and often invent new tools to achieve quality.

In house installation teams help us to offer true turn key solutions and to incorporate the needs of the final end user into the product design.

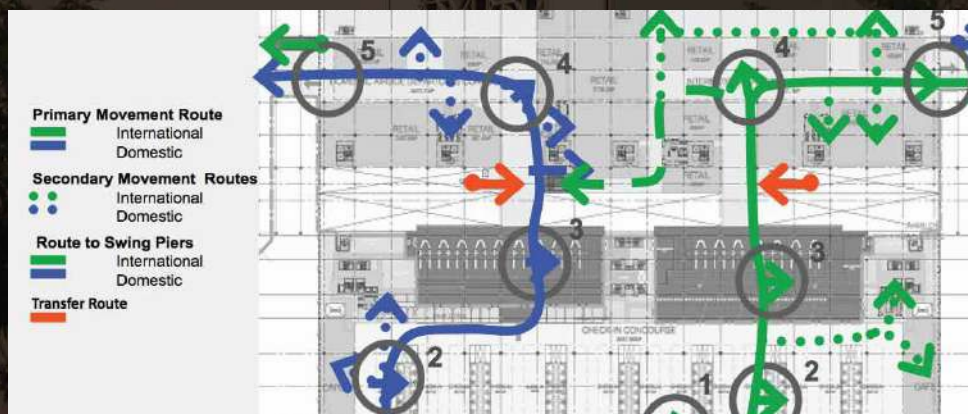

Qatar University Campus - Doha

architect: Kamal El-Kafrawi

signs and wayfinding supplied 2011–2012

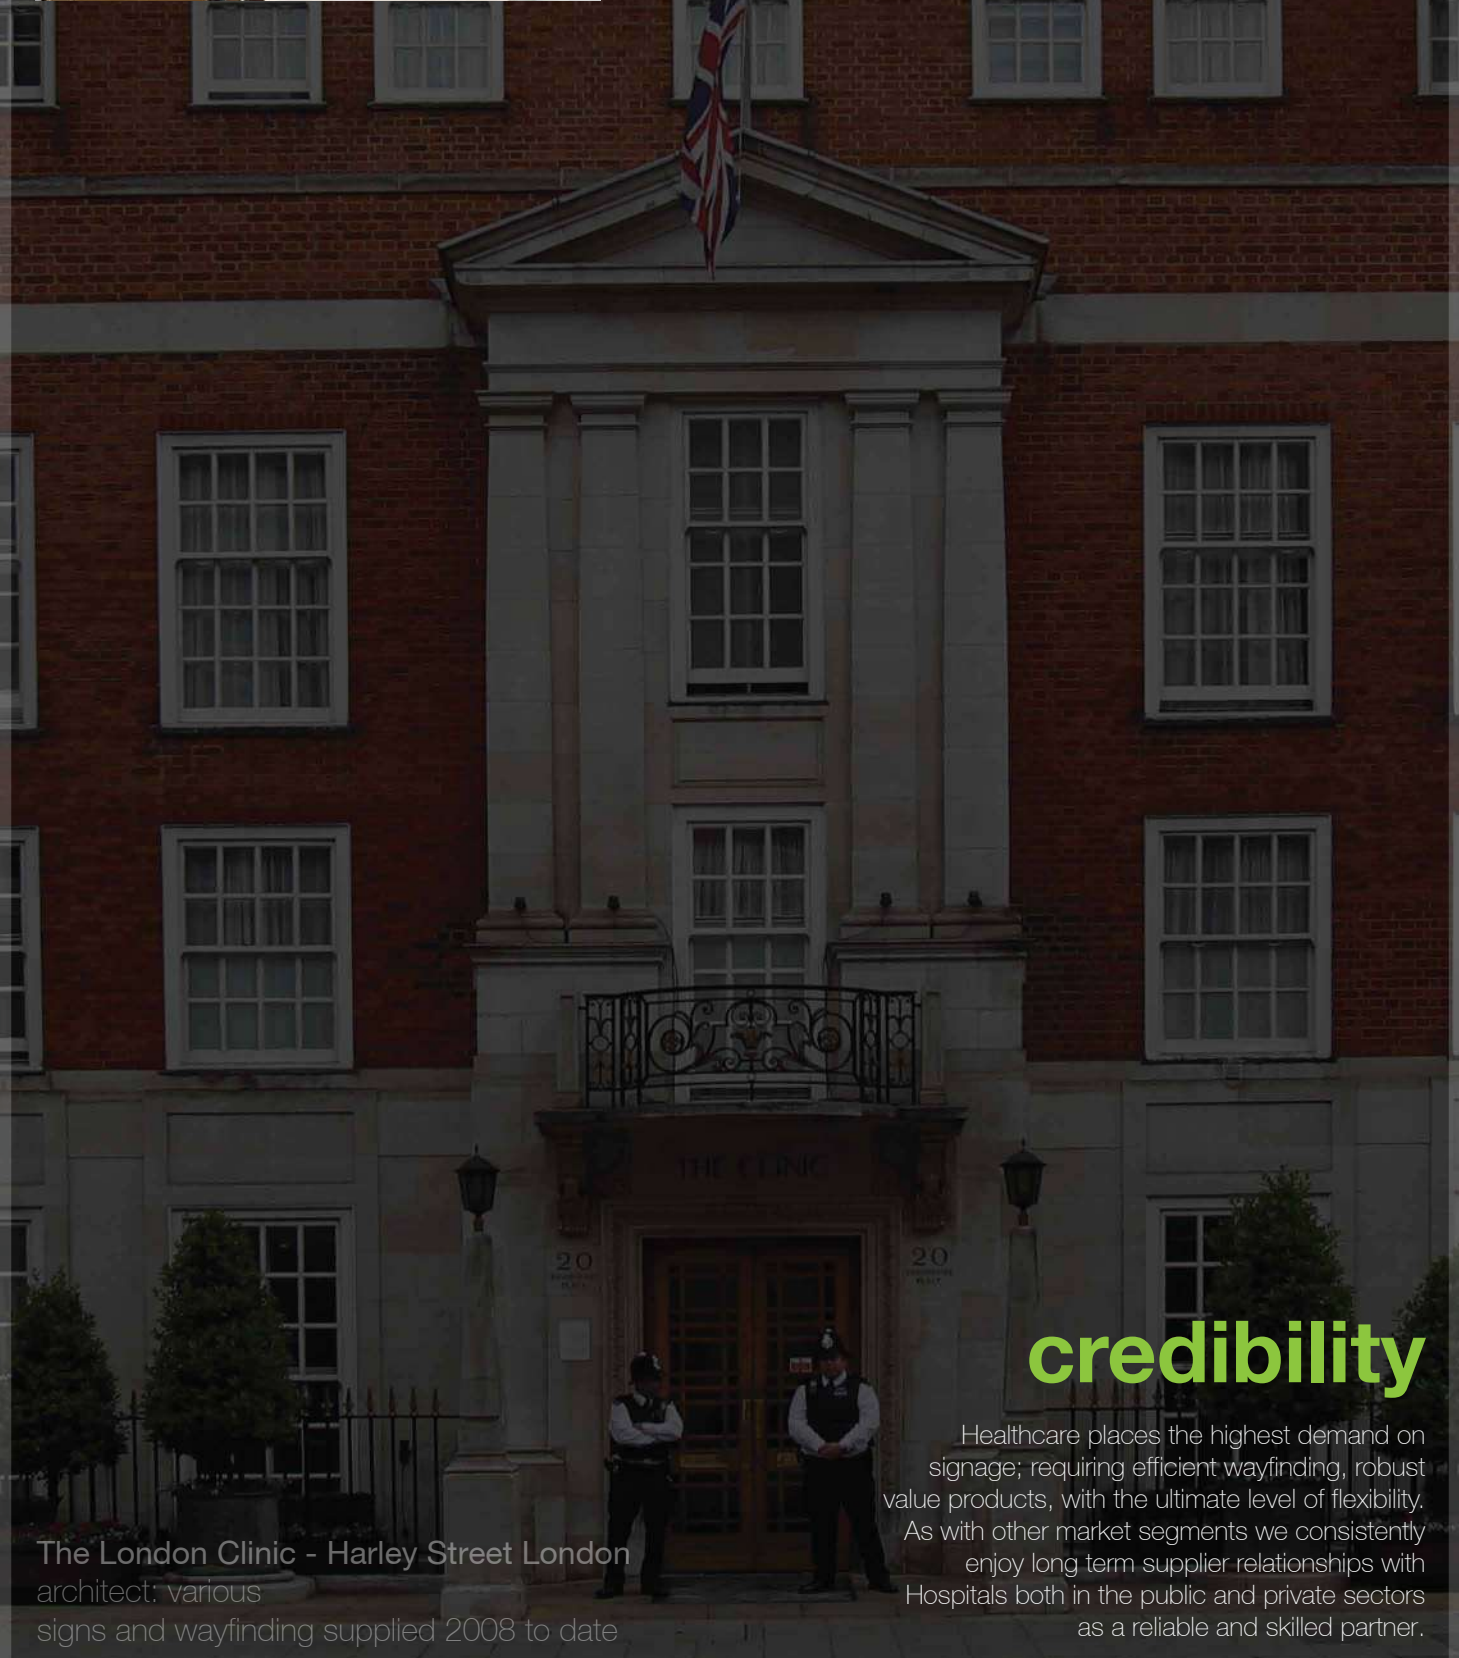

consultancy

Experience in sign design also includes WAYFINDING and signing strategies for complex hospitals and university campuses.

Saudi German Hospital - various countries

credibility

Healthcare places the highest demand on signage; requiring efficient wayfinding, robust value products, with the ultimate level of flexibility. As with other market segments we consistently enjoy long term supplier relationships with Hospitals both in the public and private sectors as a reliable and skilled partner.

corporate

xsign™

corporate values

Signs should be easy to get right. But do they express what you stand for? Ethics, drive and achievement are conveyed subliminally through material expression and form. Clean edges, permanence and purity of purpose.

managing change

Printed paper inserts can be used throughout the modular signs system whether it is for work stations or monolithic directional signs.

Belegt

Innovation in detail

Text is not restricted to stick on letters. True integration of materials can combine with ultra-slim LEDs. Meeting rooms with movement detection can animate the sign and add layers of expression.

with estate managers, graphic and
interior designers and architects.
The series aims at realising design
values appropriate to today's
environment.

environmental graphics

How to create transparency or impact? Manifestation and super-graphics play an ever more important role in defining space and a sense of place.

endless meetings

Meeting rooms are crucial resources in a modern business. Named, labelled, located or booked via the internet, the signing of meeting rooms becomes an important expression of how a company works and what they stand for.

2.09

'materialism'

Whether it's 'iced white' acrylic modular signs, fret cut stainless steel, built up letters or mixed metals in a single surface, a radical palette of materials means signs no longer have to be just paint.

xsign™

education

cutting edge

Laser guided manufacturing and etched text creates the most robust of sign systems. Secret fixings, hidden locking mechanism and vandal resistance make investment in quality possible.

The sign system challenges assumptions about the quality level affordable in the education sector. By the use of innovative technology design expression can be affordable.

Principal

'materialism'

Obsession with new materials and their properties allows the systems offered to draw on new technologies and find new expression whilst offering the benefit of predictable engineering and highest performance.

location and impact

Bespoke and system signs can be combined to create a sense of location and arrival. The most mundane of information can be conveyed with impact.

manifest change

Whether its graphics on glass for safety or personalising the environment with bespoke pictures or branding, the graphics can be realised to integrate with the architecture.

xsign™

quality and price

We take the view that signs can be robust yet flexible and still have the visual quality to belong in the architect's interior photos.

Product design should fulfil a unique need whilst belonging to whole visual effect.

Outpatient Centre

permanence & change

Special engraving techniques can create text that is totally permanent.

Flexible text can be printed paper insert signs or even web based electronics to easily facilitate change.

words are not enough
xsign™ text technology

CERAMIC TEXT

Ground glass is burned into the face of the metal plate. Offering ultra-high definition and totally vandal proof.

MULTIMETAL

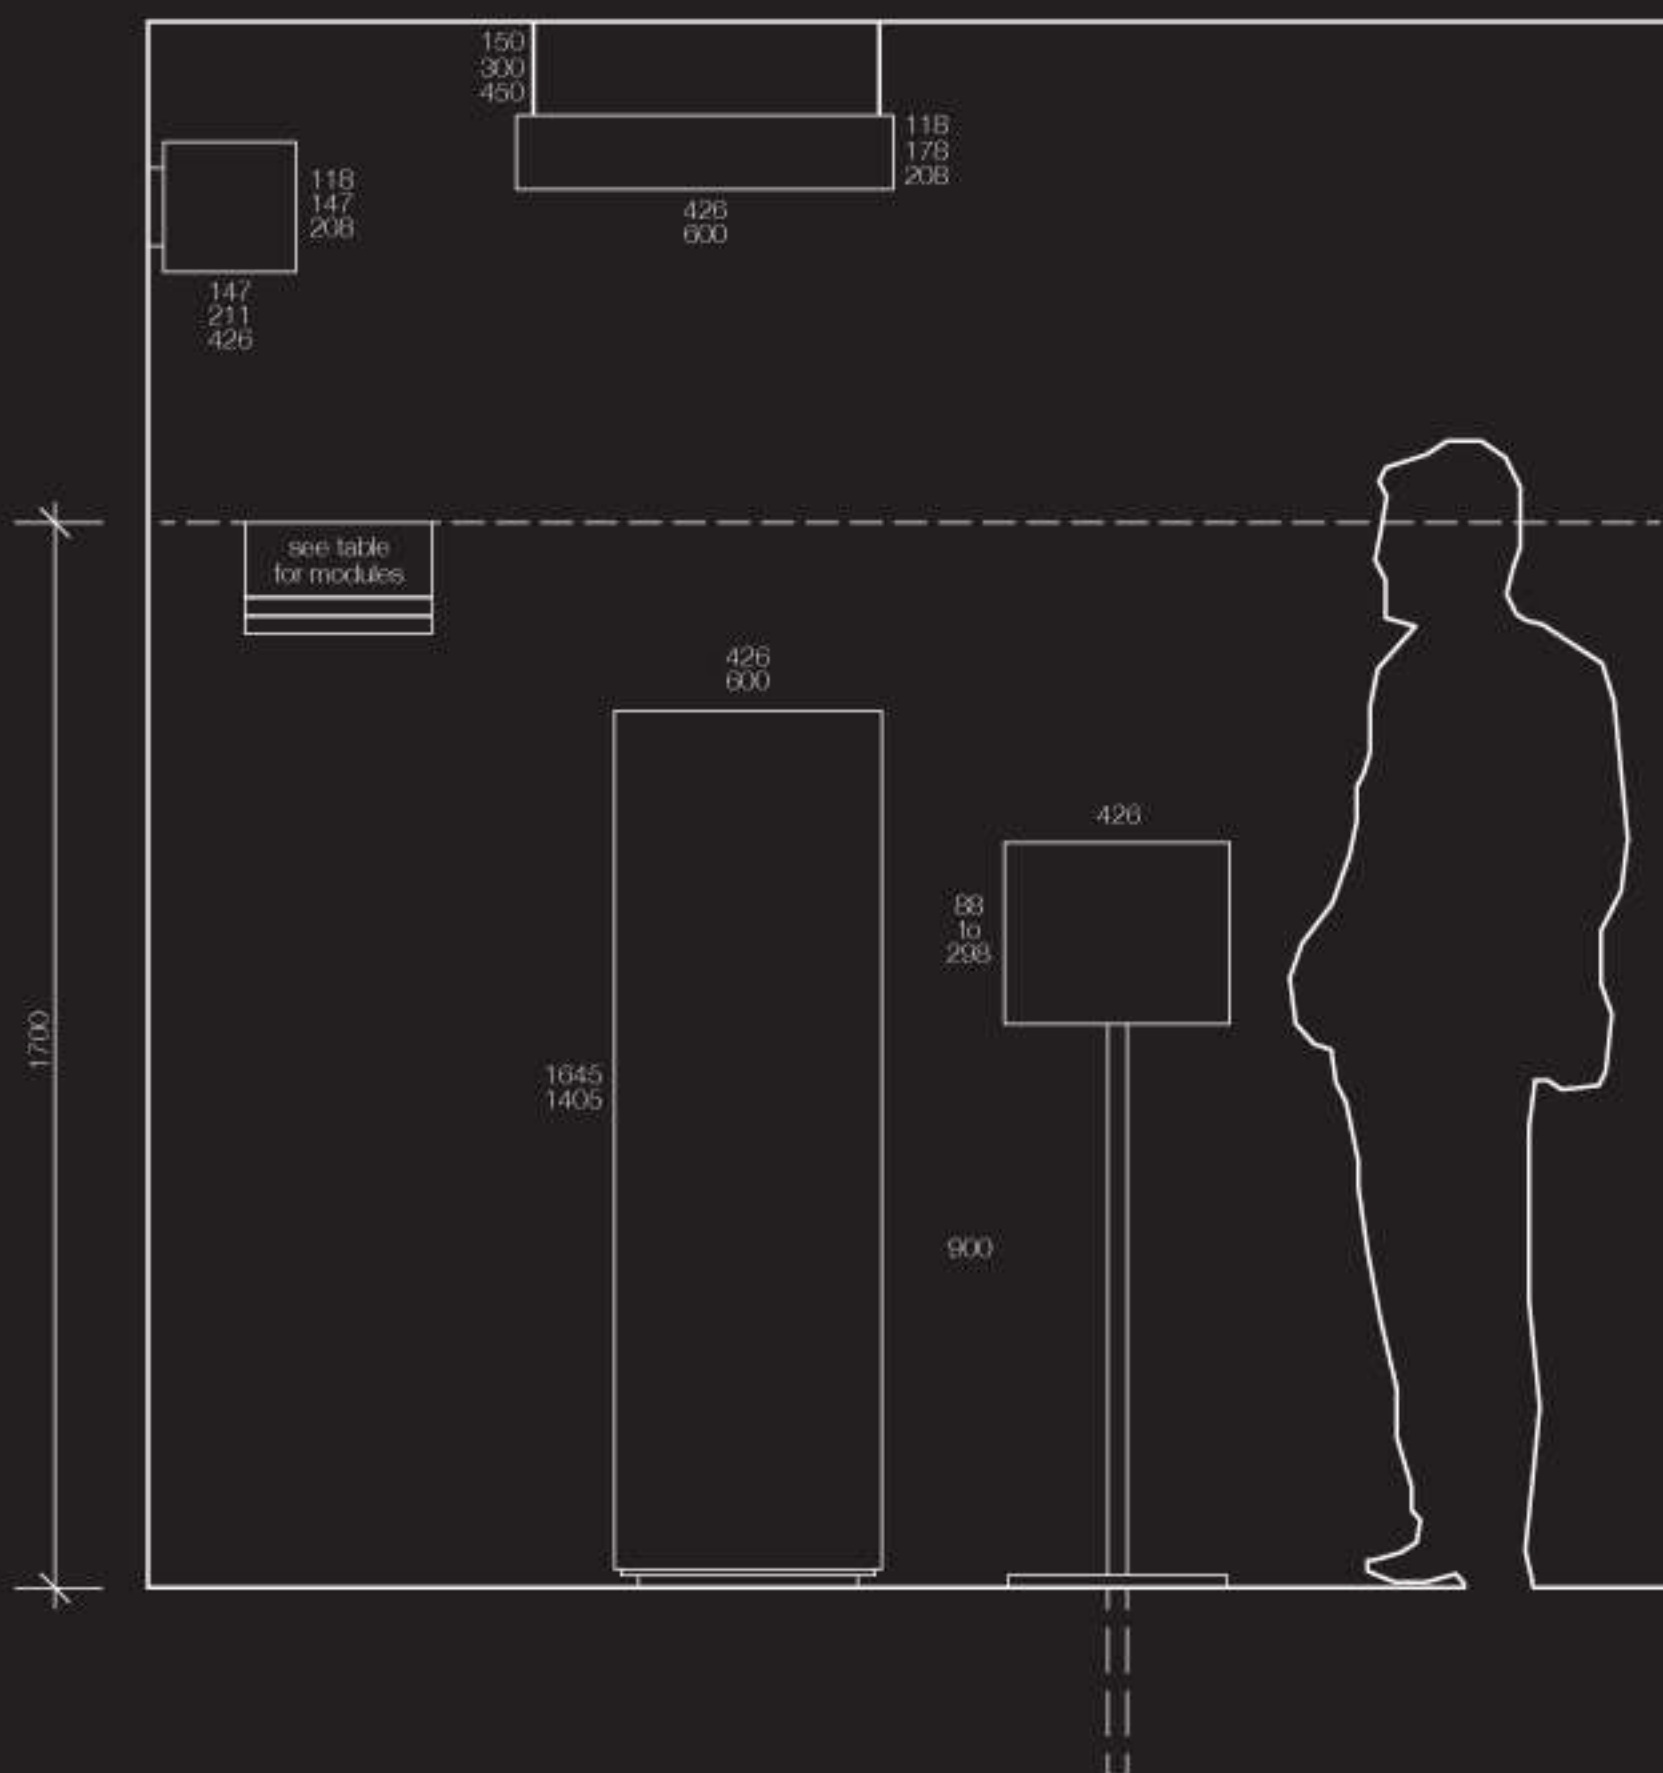

another unique process where we combine glass bead blasted and brushed satin finishes to metal in the same surface to create differentiation.

HEAT BONDED VINYL

Our vinyl letters are ubiquitous but suffer from easy attack and surplus adhesive at the edges making long term cleaning and performance a problem. Buy bonding edges at 3000 C both performance and resolution are enhanced.

FOLIO PAPER HOLDERS

for rapid change with tinted or clear covers and lockable options.

multi storey

Walls are not always convenient places to install modular signs. Sometimes signs need to stand alone, hang around or flag their presence.

standing in space

Without walls, signs can stand alone as a monolith with two standard frames and myriad combinations of material and panel combination and paper holders.

Portable freestanders complete the assortment.
